

The following directions can be used if: A wireless router, router, will be hooked up to the Netopia modem provided by Siskiyou Telephone, on a PC with Windows XP or Vista. This also includes set up for Apple computers with OS X operating systems.

The following Directions are for programming the Netopia Modem.

Step 1 – Start by putting in the following address into you web browser’s address bar (URL). Or click on the start button and click run (PC only). Type the following for either <http://192.168.1.254/>

Step 2 – User is (admin) and the password is your **Phone number** or the **first part of your email**. (Minus sisqtel.net)

Step 3 – Netopia’s home page should come up. Click on the **Home icon** below the name Netopia.

Step 4 – Click on **Expert mode** on the left hand side. Click “OK”.

Step 5 – Click on **Configure**.

Step 6 – Click on **Advanced**.

Step 7- Click on **Ethernet Bridge**.

Step 8 – Check box that says **Enable System Bridge**.

Step 9 – Click on **Submit**.

Final Step: On the top right is a yellow triangle with an exclamation mark, click on that, then click Save and Restart. All the lights on your modem should shut off except the power light. Your modem is now successfully programmed!

To set up your router please follow the directions provided by your router manufacturer.
